Concrete screw BSZ A4

Stainless steel A4

Range of loading: 0.4 kN - 19.4 kN Range of concrete quality: C20/25 - C50/60

Approvals and Certificates

Description

Option 1 approved concrete screw BSZs cut a positive thread in the concrete when being screwed in and enable attachment to be made close to the edge through the expansion-free operating principle (=undercut). The approved adjustment enables subsequent alignment to compensate for unevenness. The BSZ A4 concrete screw is also ideal for temporary fixings since it is fully removable. Installation with an impact screwdriver means that you do not need to use a torque wrench. It is quick, reliable and reduces assembly errors.

The BSZ A4 concrete screws are available with connection thread and with a range of different head shapes for a wide variety of applications.

Applications

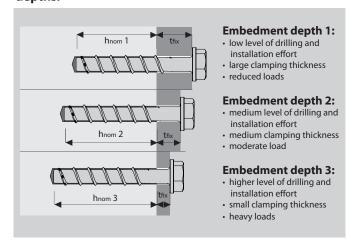

71

To anchor moderate to heavy loads outside and inside in cracked and non-cracked concrete: Railings and handrails, steel beans, wooden beams, supports and braces, brackets, pipeline and cable routes, suspended ceilings, etc.

Advantages

- European Technical Assessment for anchoring in cracked and noncracked concrete (Option 1) for concrete screws in sizes 6, 8 and 10
- With up to 3 embedment depths, it is versatile for high loads or low levels of drilling and installation effort
- European Technical Assessment for multiple use for non-structural systems in concrete and precast pre-stressed hollow core slabs for concrete screws in diameter 6
- Approved for use under seismic conditions of category C1 (ø8 to ø10 for embedment depth hnom 3)
- Approved for use under fire exposure (R30-R120).
- Small drill hole diameter, small edge and axial gap
- Rapid push-through installation with an impact screwdriver without torque regulation
- No curing times, can be loaded immediately
- Adjustable to compensate for unevenness (Ø8- Ø10 mm)
- Can be fully removed
- Wide range of possible applications through numerous variants
- Visually appealing through different head shapes
- Without approval, can also be used in compression-resistant natural stone, various solid bricks and green concrete

Highly versatile for up to three different embedment depths:

1) Not for applications in precast pre-stressed hollow core slabs

BSZ 8 BSZ 10	 Milwaukee C 18 IW (Square drive, Battery operation, max. torque 250 Nm) Bosch GDS 18E (Square drive, Mains operation, max. torque 250 Nm) Makita 6905H (Square drive, Mains operation, max. torque 300 Nm) Würth ASS 18 (1/2 inch drive, Battery operation, max. torque 180 Nm) Würth ESS (1/2 inch drive, Mains operation, max. torque 250 Nm)

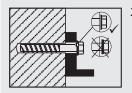

Notes for subsequent adjustment

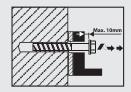

1. In order to be able to carry out subsequent adjustment, the concrete screw must be screwed at least 10mm deeper than the nominal embedment depth. This must be taken into account at the point when you are selecting the length of the concrete screw.

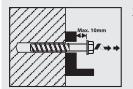

4. After fitting the lining, then remount the fixture in accordance with the installation instructions.

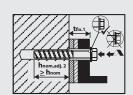

2. After successful installation, if relining is necessary for compensation, this is possible with the concrete screw BSZ (Ø 8 - 14 mm).

5. If the first lining is not sufficient then it is possible to repeat the adjustment. To do this, once again, the concrete screw must be turned back by a maximum of 10 mm so that another lining can be fitted.

3. To do this, when the adjustment is carried out for the first time, the concrete screw must be turned back by a maximum of 10 mm.

- 6. After the second lining, then remount the fixture in accordance with the installation instructions...
- The anchor can only be adjusted twice. When doing this the anchor can only be screwed back to a maximum of 10 mm.
- In total the lining which is a result of the adjustment must be a maximum of 10 mm.
- The required seating depth h_{nom} must be maintained after adjustment $(h_{nom} = L t_{fix})$.

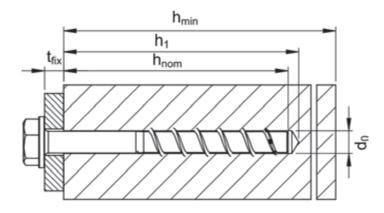

73

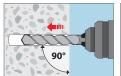

Extract from the application conditions of the European Technical Assessment ETA-16/0204 Approved loads for single anchor without influence of spacing and edge distance. Total safety factor as per ETAG 001 included (γ_M and γ_F). Load capacities under fire exposure see page 168.
