

IZJAVA O LASTNOSTIH

DoP Št..: MKT-340 - sl

| ¢ | Enotna identifikacijska oznaka tipa proizvoda: | Injekcijski sistem VMH za beton |
|----|--|--|
| ¢ | Predvidena uporaba: | Vbrizgalni sistem za sidranje v betonu, glej Priloga/Annex B |
| ¢ | Proizvajalec: | MKT Metall-Kunststoff-Technik GmbH & Co.KG Auf dem Immel 2 67685 Weilerbach |
| ¢ | Sistemi ocenjevanja in preverjanja nespremenljivosti lastnosti: | 1 |
| \$ | Evropski ocenjevalni dokument: Evropska tehnična ocena: Organ za tehnično ocenjevanje: Priglašeni organi: | ETAG 001-5, 2013-04 ETA-17/0716, 08.12.2017 DIBt, Berlin NB 1343 – MPA, Darmstadt |

♦ Navedene lastnosti:

| Bistvene značilnosti | Lastnosti | | | | |
|--|---|--|--|--|--|
| Mehanska odpornost in stabilnost (BWR1) | | | | | |
| Značilni upori za statične in kvazi-statične obremenitve in Značilni upori za kategorije potresne zmogljivosti C1 + C2 | Priloga/Annex C1 – C7 | | | | |
| Premiki | Priloga/Annex C8 – C10 | | | | |
| Varnost pri požaru (BWR2) | | | | | |
| Ogenj vedenje | Razred A1 | | | | |
| Požarna odpornost | NPD (No Performance Determined) lastnost ni določena | | | | |

Lastnosti proizvoda, navedenega zgoraj, so v skladu z navedenimi lastnostmi. Za izdajo te izjave o lastnostih je v skladu z Uredbo (EU) št. 305/2011 odgovoren izključno proizvajalec, naveden zgoraj.

Podpisal za in v imenu proizvajalca:

Stefan Weustenhagen (Generalni direktor) Weilerbach, 08.12.2017

p.p. Rigaller

Dipl.-Ing. Detlef Bigalke (Vodja razvoja izdelkov)

Izvirnik te izjave o uspehu je bil napisan v nemškem jeziku. V primeru odstopanj v prevodu je nemška različica veljavna.

| 1 | | | | | | | |

1) except hot-dip galvanised

Use conditions (Environmental conditions):

- · Structures subject to dry internal conditions (zinc plated steel, stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist (stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions exist (high corrosion resistant steel)
 Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used)

Design:

- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.)
- · Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work
- Anchorages under static or quasi-static actions are designed in accordance with:
 - EOTA Technical Report TR 029 "Design of bonded anchors", Edition September 2010 or
 - CEN/TS 1992-4:2009
- Anchorages under seismic actions (cracked concrete) are designed in accordance with:
 - EOTA Technical Report TR 045 "Design of Metal Anchors under Seismic Action", Edition February 2013
 - Anchorages shall be positioned outside of critical regions (e.g. plastic hinges) of the concrete structure
 - Fastenings in stand-off installation or with a grout layer are not allowed

Installation:

- Dry or wet concrete
- Hole drilling by hammer or compressed air drill or vacuum drill mode
- · Overhead installation allowed
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible
 for technical matters of the site
- Fastening screws or threaded rods (incl. nut and washer) must comply with the appropriate material and property class
 of the internally threaded anchor rod

Injection System VMH for concrete

Intended Use

Intended Use Cleaning and setting tools Annex B3

| Insta | allation instruction | s (continuation) | | | | | | | | |
|---|--|--|--|--|--|--|--|--|--|--|
| Inje | ection | | | | | | | | | |
| 3. | ALL J | Attach the supplied static-mixing nozzle to the cartridge and load the cartr dispensing tool. For every working interruption longer than the recommended working time as for new cartridges, a new static-mixer shall be used. | | | | | | | | |
| 4. | her | Prior to inserting the rod into the filled bore hole, the position of the embed be marked on the threaded rod or rebar | dment depth shall | | | | | | | |
| 5. | min.3x | Prior to dispensing into the drill hole, squeeze out separately a minimum or and discard non-uniformly mixed adhesive components until the mortar sh grey colour. | of three full strokes nows a consistent | | | | | | | |
| 6a. Starting from the bottom or back of the cleaned drill hole fill the hole up to approximately two-thirds with adhesive. Slowly withdraw the static mixing nozzle as the hole fills to avoid air pockets. For embedment larger than 190 mm, an extension nozzle shall be used. Observe working times given in Table B5. | | | | | | | | | | |
| 6b. | | Retaining washer and mixer nozzle extensions shall be used according to Table B4 for the following applications: Horizontal installation (horizontal direction) and ground installation (vertical downwards direction): Drill bit-Ø d₀ ≥ 18 mm and embedment depth h_{ef} > 250mm Overhead installation: Drill bit-Ø d₀ ≥ 18 mm | | | | | | | | |
| | | | | | | | | | | |
| Inje | ction System VMH f | or concrete | | | | | | | | |
| | Intended Use Installation instructions (continuation) | | | | | | | | | |

| Inst | allation instruction | s (continuation) |
|-------|----------------------|---|
| Inser | ting the anchor | |
| 7. | | Push the threaded rod or reinforcing bar into the hole while turning slightly to ensure proper distribution of the adhesive until the embedment depth is reached. The anchor shall be free of dirt, grease, oil or other foreign material. |
| 8. | | Make sure that the anchor is fully seated up to the full embedment depth and that excess mortar is visible at the top of the hole. If these requirements are not maintained, the application has to be renewed. For overhead installation, the anchor should be fixed (e.g. by wedges). |
| 9. | | Allow the adhesive to cure to the specified time prior to applying any load or torque. Do not move or load the anchor until it is fully cured (attend Table B5). |
| 10. | | Remove excess mortar. |
| 11. | Tinst | The fixture can be mounted after curing time. Apply installation torque T _{inst} according to Table B1 or B2 by using a calibrated torque wrench. |
| 12. | | Annular gap between anchor rod and attachment may optionally be filled with mortar. Therefore, replace regular washer by washer with bore and plug on reducing adapter on static mixer. Annular gap is completely filled, when excess mortar seeps out. |

Tabelle B1: Working time and curing time

| Concrete temperature | Maximum | Minimum cu | Iring time | | | | | |
|-----------------------|-----------------|--------------|--------------|--|--|--|--|--|
| Concrete temperature | working time | dry concrete | wet concrete | | | | | |
| -5°C to -1°C | 50 min | 5 h | 10 h | | | | | |
